STATE FEASIBILITY-BASED STANDARDS

¹Alaska cleanup standards apply only to illegal methamphetamine-manufacturing sites. The Alaska Department of Environmental Conservation has not developed standards for other types of drug laboratories, such as those for LSD and ecstasy.

²The Arizona Administrative Code, Section 4-30-305, establishes a post-remediation clearance level of 0.1 µg/100 cm² for LSD and Ecstasy.

³The Arkansas Department of Health has developed guidelines that are intended to provide advice in contamination cleanup. The information contained in the guidelines should be used as guidelines and are not regulations or rules subject to enforcement.

⁴Hawaii cleanup standards apply only to illegal methamphetamine-manufacturing sites. The Hawaii Department of Health has not developed standards for other types of drug laboratories, such as those for LSD and ecstasy.

⁵ Pursuant to Section 16.02.25.500 of the Idaho Administrative Code, Standards may be established for other controlled substances found in clandestine drug laboratories on a case by case basis, abased on an inventory of chemicals found, and after consultation with the department, the property owner, law enforcement and a qualified industrial hygienist.

⁶The Indiana Administrative Code, Title 318, Section 1-5-2, establishes a decontamination level of 0.5µg/100 cm² for Amphetamine, Methcathenone, LSD, Ecstasy, PCP, and GHB.

⁷The New Mexico Administrative Code, Section 20.4.5.17, establishes a clearance level for an unlawfully manufactured controlled substance or its precursor drugs of less than 1.0 µg/ft².

⁸The Utah Administrative Code, Section 382-600-6, establishes a decontamination standard of ≤ 0.1 µg/100 cm² for Ecstasy.

NOTE: For a comprehensive outline of state statutes, regulations and guidelines related to properties that are contaminated by controlled substance laboratories, please see NAMSDL's *Common Themes Regarding Where Controlled Substance Laboratories Are Found* , on file with NAMSDL.
